## ACRYLIC UNDERCOAT WATER BASED

### DESCRIPTION:

Acrylic Undercoat is a water thinnable primer/undercoat with good opacity. It is formulated with a Copolymer emulsion to give a fast and easy priming and undercoat properties.

### FINISH:

Matt

### SCOPE & PURPOSE:

Acrylic Undercoat is especially recommended for priming and undercoating masonry, plaster and cement rendered surfaces. It can also be applied on wood, softboard, hardboard and primed metal surfaces. It provides a reasonably tough and moderately alkali resistant film.

### SPREADING RATE:

Approximately 14 to 16 square metres per coat per litre on a smooth surface.

### THINNING:

Supplied ready for use. But if required, water may be used for thinning.

### METHOD OF APPLICATION:

Suitable for application by brush or roller. Contents to be stirred well before use.

### SURFACE PREPARATION:

All surfaces should be clean, dry and free from oil, grease, rust or dust and any loose or flaking materials. Wooden surfaces should be rubbed down with fine sanding and metal surfaces should be primed adequately with a suitable metal primer.

### DRYING TIME:

Surface drying takes about 30 minutes. Recoating is possible after an interval of about 2-3 hours.
